

London TDM

Civil and Construction Engineering Training Courses

Course Venue: Malaysia - Kuala Lumpur

Course Date: From 21 June 2026 To 25 June 2026

Course Place: Royale Chulan Hotel

Course Fees: 6,000 USD

Introduction

Building Information Modeling (BIM) is a crucial modern tool in construction and design that allows professionals to plan, design, construct, and manage buildings and infrastructure with digital precision. Over this 5-day course, participants will gain comprehensive knowledge and hands-on experience with BIM, preparing them to effectively use this tool in their projects.

Objectives

- Understand the fundamentals and benefits of BIM.
- Navigate and utilize BIM software tools efficiently.
- Apply BIM in various stages of the project lifecycle.
- Implement collaboration strategies within multidisciplinary teams using BIM.
- Develop skills to manage and execute BIM projects effectively.

Course Outlines

Day 1: Introduction to BIM and Industry Overview

- Overview of BIM and its role in the AEC industry
- History and evolution of BIM technology
- Key benefits and challenges of implementing BIM
- Industry standards and protocols
- Exploration of BIM software options and interfaces

Day 2: BIM Tools and Technologies

- Introduction to popular BIM software platforms
- Basic functionality and interface navigation
- Creating and managing digital models
- Introduction to 3D visualization and rendering
- Hands-on practice with BIM software

Day 3: BIM in Project Management

- Integrating BIM into project planning and scheduling
- Cost estimation and management using BIM
- BIM for facility management and maintenance
- Collaboration and communication through BIM platforms
- Case studies on successful BIM project management

Day 4: Advanced BIM Applications

- 4D and 5D BIM: Time and cost integration
- Clash detection and resolution methodologies
- Energy performance and sustainability analysis
- Customizing BIM solutions for complex projects
- Exploration of future trends in BIM technology

Day 5: Implementing and Managing BIM Projects

- Developing a BIM execution plan
- Setting up a collaborative project environment
- Data management and interoperability challenges
- Evaluating BIM project outcomes and Return on Investment (ROI)
- Final project presentations and feedback session
