Introduction

The "Data Management and Governance" professional course is designed to equip participants with essential skills and knowledge to effectively manage and govern data within their organizations. Throughout this 5-day intensive program, attendees will learn about data lifecycle management, data quality, regulatory compliance, and best practices in data governance. The course aims to prepare professionals for the challenges of data-driven decision-making and fostering a culture of data stewardship.

Objectives

- Understand the key concepts and principles of data management and governance.
- Learn how to develop and implement data governance frameworks.
- Ensure data quality and integrity through effective management techniques.
- Navigate data protection regulations and compliance requirements.
- Cultivate a culture of data stewardship and ethical data use.

Course Outlines

Day 1: Fundamentals of Data Management

- Introduction to data management and governance.
- Data lifecycle management: collection, storage, and disposal.
